

Use of technology and its impact

Technology is the application of science which are developed to make the work easier, faster and more accurate. Technology term arrived from Greek word techne which means art, skill and craft. (Lancaster, 2016) Technology is one of the important factor to change the whole world direction into the new way to learn improve and move on things. Invention of new tools and techniques in technology varies with the different evolution of societies. Technology field has been exponentially updating and being advance with the change of society. Technology used to burn fire in hunting society is different than industrial society. Not only in burning fire but whatever we see around us are given by the improvement of technology. Technology has been taking revolutionary change that's why now a day's we and our technology don't exist only in earth.

People are using technology to make our life better and better. May be it could be worst too but depends on person to person how they use. If we have to see in 21st century we are in advance era of technology. Research on things are being easier then past. Recently James Webb telescope by NASA was able to capture the images of more than 13 billion years ago. People are learning through the use of software and application. In field of education, teacher are using tech devices to teach present and experiment any topics through the use of software and application. Artificial intelligence change the way of doing work by machines. Every work on industry are being replaced by automated and artificial intelligence machine. Vehicles and Areophane are making transportation more and faster. In field of health, technology device are used for operation or diagnose of the diseases. (technology and it's impact, n.d.)

There are positive and as well as negative impact of the technology. Actually it's depend on the people how they use. Some positive impact are like we can easily access any resources to learn. The transportation and curios service is faster, connecting the people from one corner of the world to another one, diagnose disease and curing it also helping in operation. It became easy to research about any topic. Business and industry are evolving into disruptive market which is helping to utilize proper use of resources. However we have a lot of positive impact but there's negative too. People are being more isolated. Hacking issue are increasing day by day. We are being trapped by frauds by giving greed. We are being lazier and the life expectancy is decreased. People are facing lots of health issue. Because of the improvement of technology, war and conflict also in starting phase of world war 3. (wikipedia, n.d.) (Mori, n.d.)

Hence impact are directly proportional to the use of technology. If people are using technology in a right way then the impact will be good otherwise the impact will be very bad.
